PROPOSAL
FOR
AN
IMMERSION HEATER

Incendiary,
General

7 October 1960

CONFIDENTIAL

A requirement has arisen for the fabrication of one only immersion style canteen heater to be operated by pyrotechnic heat cartridges. Since the sample provided is of foreign origin, it will be necessary to change several of the dimensions in order to permit its use with the presently available domestic cartridges. Further, the threaded plastic cap will be tapped to fit the sample canteen that has also been provided. The manufacturer of the heat cartridges has informed us that he will load the one dozen cartridges to be furnished with the heater, with an extra charge of 5 BTU per cartridge. This latter addition should more closely resemble the original charge used in the sample device.

It is suggested that this work be performed as a work order under the open end Task Order 00 of Contract RD 45 and the duration of the work be written to coincide with the end of this fiscal year. It is expected that delivery of the new immersion heater together with heat cartridges can be made within thirty days following authorization to proceed.
